

Mining with Megaminer

We Change Cloud Mining Market

Project Summary:

Our company tokenizes the computing power of the existing mining farm. Megaminer is issuing tokenized MINE licenses, the holders of which will receive rewards in proportion to the rewards received from mining.

The mining farm is located in Quebec, Canada:

- cold climate and cheap electricity
- Meets the high requirements of data centers:
- redundant power, redundant internet line, cooling, air purification, automatic fire extinguishing
- Supervision of specialists 24/7/365

MINE Licence as a concept:

Buying a computing licenses is similar to buying electricity from a power plant and reselling it:

- you own neither the grid nor the power plant.
- you bought kilowatt-hours directly, the amount of energy that will become useful work.

In the case of a MINE license, you are also purchasing some amount of computing that can be used for mining or cloud computing.

- in essence, your computing power will be resold at a higher price.
- we manage the capacity to keep your licensed equipment running at peak efficiency.

MINE Licence, the offer:

Megaminer offers licenses for an established volume of computations:

- 1 license costs \$ 1000;
- 1 license gives the right to perform 10 Petahashes of Ethash algorithm; license has a duration of 3 years;
- License buyes gets reward (potentially up to 50% p.a.);
- Volume of computations per one license is calculated as approx. 3 years of Nvidia RTX 3070 non-stop work.
